### Description

CD4041UBMS types are quad true/complement buffers consisting of n- and p- channel units having low channel resistance and high current (sourcing and sinking) capability. The CD4041UBMS is intended for use as a buffer, line driver, or CMOS-to-TTL driver. It can be used as an ultra-low power resistor-network driver for A/D and D/A conversion, as a transmission-line driver, and in other applications where high noise immunity and low power dissipation are primary design requirements.

The CD4041UBMS is supplied in these 14 lead outline packages:

Braze Seal DIP	H4Q
Frit Seal DIP	H1B
Ceramic Flatpack	H3W
