

## 50 V - 1.5 A QUAD DARLINGTON SWITCHES

- OUTPUT CURRENT TO 1.5 A EACH DARLINGTON
- MINIMUM BREAKDOWN 50 V
- SUSTAINING VOLTAGE AT LEAST 35 V
- INTEGRAL SUPPRESSION DIODES (ULN2064B, ULN2066B, ULN2068B and ULN2070B)
- ISOLATED DARLINGTON PINOUT (ULN2074B, ULN2076B)
- VERSIONS COMPATIBLE WITH ALL POPULAR LOGIC FAMILIES

tible with popular 5 V logic families and the ULN2066B and ULN2076B are compatible with 6-15 V CMOS and PMOS. Types ULN2068B and ULN2070B include a predriver stage to reduce loading on the control logic.

### DESCRIPTION

Designed to interface logic to a wide variety of high current, high voltage loads, these devices each contain four NPN darlington switches delivering up to 1.5 A with a specified minimum breakdown of 50 V and a sustaining voltage of 35 V measured at 100 mA. The ULN2064B, ULN2066B, ULN2068B and ULN2070B contain integral suppression diodes for inductive loads have common emitters. The ULN2074B and ULN2076B feature isolated darlington pinouts and are intended for applications such as emitter follower configurations. Inputs of the ULN2064B, ULN2068B and ULN2074B are compa-

**MOUNTING INSTRUCTIONS**

The  $R_{thj-amb}$  can be reduced by soldering the GND pins to a suitable copper area of the printed circuit board (Fig. 14) or to an external heatsink (Fig. 15).

The diagram of figure 16 shows the maximum dissippable power  $P_{tot}$  and the  $R_{thj-amb}$  as a function of the side "α" of two equal square copper areas having a thickness of  $35\ \mu$  (1.4 mils).

**Figure 14 :** Example of P.C. Board Copper Area which is Used as Heatsink.

During soldering the pins temperature must not exceed  $260\ ^\circ\text{C}$  and the soldering time must not be longer than 12 seconds.

The external heatsink or printed circuit copper area must be connected to electrical ground.

**Figure 15 :** External Heatsink Mounting Example.

**Figure 16 :** Maximum Dissippable Power and Junction to Ambient Thermal Resistance vs. Side "α".
